

Save it as a skill

Turn the document you built about your principal into something that works without being remembered.

01 Executive Playbook

02 Executive Voice

03 LinkedIn

ONE

The idea

Three SortedEA skills hand you a document. A document has to be remembered. A skill does not.

From then on it applies itself, every time you work on your principal's behalf.

You do not build anything by hand. A fourth skill, `save-as-skill`, does the packaging: it reads the document, asks what to call it, strips out what must not travel, and gives you a file.

YOU NEED

- Any Claude plan, with code execution on. Free, Pro and Max: **Settings** → **Capabilities**. Team and Enterprise: **Organization settings** → **Skills**.
- `save-as-skill` installed, from the same library as the other three.

IF YOU CANNOT SEE THE OPTION TO ADD A SKILL

Your organisation has turned off user-created skills. That is an administrator setting, not a fault. Ask before you spend an afternoon on it.

Do it

Same three steps whichever document you are packaging.

1 Finish the source skill.

Run `executive-playbook`, `executive-voice` or `linkedin-ghostwriting` until you have the document. Stay in the same conversation.

2 Say *save as skill*.

You will be asked one question: what to call it. A name is suggested, built from your principal's name, so you can usually just say yes.

Then you get a zip file.

3 Upload it.

Customize → Skills → Add → Upload a skill. Then switch it on, because uploading and enabling are two different things.

In Claude Code instead? Unzip the folder into `~/.claude/skills/`.

CHECK TWO THINGS WHEN IT HANDS THE FILE BACK

- **The list of what it left out.** It will show you. Read it, and make sure nothing important to the work was stripped along with the private material.
- **That it fires.** Ask it something you know the answer to. If nothing happens, the description is wrong, not the content. Say so and it will rewrite it.

KEEPING IT ALIVE

Every time your principal changes something you drafted, add it to `references/log.md` inside the skill. Once a quarter, anything that has happened three times becomes a rule. Fifteen minutes.

NO SAVE-AS-SKILL INSTALLED?

The last page of this guide is a prompt that does the same job. Paste it under your document.

THREE

The three, side by side

What you are packaging, and the one thing that must never travel with it.

	EXECUTIVE PLAYBOOK	EXECUTIVE VOICE	LINKEDIN
You have	An operating file and a private annex	A voice profile with measurements and samples	House rules for their presence
You get	playbook-jchen	voice-jchen	linkedin-jchen
Never travels	The whole private annex. Date of birth, home address, family, doctor, passport, loyalty numbers.	Samples still carrying real names, figures or clients.	Their login. Anything not yet public.
Test it	Ask five things you know the answer to. Then ask something it does not cover, and check it says so.	Write three pieces, mix with three real ones, ask a colleague which are real.	Draft three posts. Expect one to fail your own no-go check.

THE ONE THAT CATCHES PEOPLE

The playbook annex. It is sitting in the same conversation, so it is easy for it to end up in the skill. The packager is built to leave it out and to tell you it did. Read that list.

The skill may hold a pointer: *"passport details are in the annex, ask me"*. Never the value.

TWO THINGS WORTH KNOWING

Playbook tags survive. [said] is acted on directly, [observed] gets flagged when the stakes are high, [inherited] is treated as a rumour. And when the playbook does not cover something, the skill asks rather than inventing a preference.

LinkedIn carries a substance rule. Since 2026 LinkedIn demotes what it calls "AI slop", meaning content that sounds polished but has no point of view. So the skill is told: if there is no specific claim, number, named example or genuine opinion, do not write the post.

Five privacy rules

All three describe a named real person, built from their private material. That makes them different from every other skill you will install.

- 1 **Never publish it.** No public repository, no skills directory, no marketplace.
- 2 **Never share it organisation-wide.** The button is right there. This is not one of those.
- 3 **Read what the packager stripped.** It shows you. That list is the check.
- 4 **Tell your principal it exists.** They agreed to a document, not to something that runs automatically.
- 5 **Delete it when you leave.** Not yours to take.

THE TEST THAT CATCHES MOST MISTAKES

Before a line goes in, ask: **if this were forwarded to the wrong person tomorrow, which lines would I regret?**

Move those to the annex. If you would regret them there too, do not write them anywhere.

WHEN IT DOES NOT WORK

Nine times out of ten the fix is one added sentence, not a rebuild. Open the skill, highlight the part that is wrong, click **Edit with Claude**.

WHAT YOU SEE	WHAT IS WRONG
It never fires	The description. Ask for it to be rewritten around the words you actually type.
Nothing happens	Uploaded but not switched on.
Upload rejected	Rare, but re-zip the folder rather than the files inside it.
Reads as a parody	Every pattern applied at full force. Ask for the strength labels to be added.
It invents things	Ask for the instruction to ask rather than guess.
Right facts, wrong feel	The samples are not being read. Ask for a line pointing at them.
Too much was stripped	Say which item you need and why. It will rebuild with that kept.

The prompt

If you do not have `save-as-skill` installed. Paste this underneath your finished document.

Package the document above as an installable Claude skill, and give me the zip.

Do the whole job. Ask me one question only: what to call it. Suggest a name yourself, built from my principal's name, so I can just say yes.

Build it like this:

1. NAME. Lowercase, letters, numbers and hyphens only, 64 characters max. It cannot contain the words "claude" or "anthropic" - both are reserved. Fix my name silently if it breaks a rule, and tell me in one line.
2. STRIP FIRST, before you write anything. Leave out:
 - Any password, PIN or recovery code, however it is framed
 - Private annex material: date of birth, home address, family, personal contacts, doctors and hospitals, passport, loyalty and card numbers
 - Real names, figures and client details inside writing samples - replace with placeholders like "Can you get me the [figure] by [day]?"
 Keep a pointer where the skill needs to know a thing exists ("passport details are in the annex, ask me"), never the value. Keep a list of what you removed.
3. FOLDER. <name>/SKILL.md plus <name>/references/ for the long material - verbatim samples, long lists - and an empty log.md for corrections. Everything in SKILL.md loads every time, so keep it to the rules.
4. FRONTMATTER. name matching the folder, and a description under 200 characters with NO COLON in it (an unquoted colon breaks the file and the skill fails silently). Write the description around the words I would actually type when I want this.
5. BODY. Imperative, not descriptive: "mean sentence length 14 words" becomes "keep sentences short, around 14 words". Keep every number. Keep any strength labels or [said]/[observed]/[inherited] tags and explain them at the top. Add a line telling Claude to read the reference files when a draft feels wrong. End with these two rules:
 - Never change a fact to match a preference.
 - Do not force every pattern in. If it reads as an imitation, use fewer.
6. CHECK, yourself, before zipping: name valid and matching the folder, description under 200 with no colon, frontmatter parses, nothing from step 2 survived.
7. ZIP THE FOLDER, not the loose files, and give me the file.

Then tell me in a few lines: how to install it, what you left out, and to log corrections as they happen. Do not hand me instructions instead of a file.

Platform details come from Anthropic's own help pages, checked 31 August 2026. If your screen disagrees, your screen is right. LinkedIn quotations come from LinkedIn's help pages and User Agreement, same date.

The tiering, the tags and the naming convention are ours, not official guidance. Adapt them to whatever your organisation requires for material about a named person.
